

Lock Ring

Lattimer lock rings are suitable for use on blow heads and baffle arms from all major manufacturers.

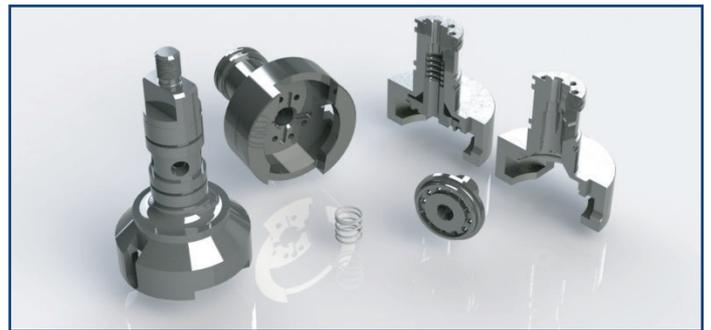

Lattimer lock rings are manufactured from high grade steel and heat treated to increase strength and durability to withstand high impact forces and minimise wear.

Lattimer lock rings are available in final blow, final blow-finish cooling, standard, pressure plate and customer specific options.

Features

- Excellent service life
- Easily maintained
- Replaceable wear parts
- Reduce cost

Benefits

- Precision manufacturing methods guarantee both fit and function.
- Heat Treatment extends the service life of the lock ring by reducing the rate of wear, saving cost to the customer.
- Lattimer's expertise and quality enable customer specials to be designed and manufactured to address specific customer issues.
- The pressure plate design reduces wear between the lock ring and mould forming equipment.
