

Neck Ring Arm Assemblies

Lattimer Neck ring arm assemblies are supplied ready for installation and are suitable for use on machines from all major manufacturers.

Lattimer neck ring arms are manufactured from a high tensile strength ductile cast iron or steel, increasing longevity and enabling the parts to be hardened to withstand wear when in use.

Neck Ring Arms from Lattimer are available from SG to QG and in all centre distances, offset, straight and to customer specific requirements.

Features

- Supplied with industry standard leaf springs.
- Steel Neck ring arms can be hardened to 55RC-58RC.
- Available with exchangeable hardened steel inserts.
- Manufactured in matched pairs for all machine types and sizes.

Benefits

- Precision manufacturing methods guarantee both fit and function.
- High Tensile Ductile Cast iron increases resistance to wear and impact fracture.
- Heat Treatment extends the service life of the arm, reducing the rate of wear.
- Replaceable hardened inserts further reduce wear and reduce the cost of wear induced maintenance.
- Lattimer's expertise and quality enable customer specials to be designed and manufactured to address specific customer issues.
